Media Animal: Instagram And Facebook Posts

Distinguishing Features / Markings:

Play Group 1

Adoption Summary: Meet Sir Lunch-a-lot, a 4-year-old Lab mix who is ready to quest his way right into your heart! This noble gentleman truly lives up to his name; he is highly food-motivated and will happily show off his best behavior in exchange for a tasty snack. When he isn't "patrolling" the kitchen for fallen crumbs, Sir Lunch-a-lot is a social butterfly who loves meeting new people and treats every walk like a grand expedition. Whether he's sniffing out a new trail or leaning in for some well-deserved chin scratches, he is a sweet, curious companion who just wants to share life's adventures (and snacks) with a forever family. 🐾 🍖 ✨

Existing General Animal Notes

Animal ID: 380971
Type: Dog
Breed: Labrador Retriever
Name: Sir Lunch-A-Lot (mcas)

Entry Date/Time	Category	Notes
2/9/2026 7:38:27 AM	Animal Care Notes	During morning kennel monitoring sheets, observed dog lying in kennel, with much nasal discharge present, much drool present, blood shot eyes, possibly elevated breathing, dark runny stool in kennel. Showed C.P. a video I made with the cell phone from the adoptions counseling area
2/2/2026 2:00:55 PM	Adoption Notes	ADOPTION RETURN Date of Return: 2/2/26 Primary Reason: Not a good fit for first time dog owner. Surrender Profile Uploaded? (Y/N/NA): Not yet. Indemnities/Restrictions/Bio Updated? (Y/N/NA): N/A
1/26/2026 4:01:57 PM	Adoption Notes	APPROVED ADOPTION Adopter PID: 270889 in county Adoption Type: in person Medical: Reviewed medical notes available. Discussed preventative treatments provided (vaccines, deworming and flea control). Discussed establishing care at own vet and reviewed participating clinics offering free/discounted first exams. Discussed common illnesses portion of adoption packet. Reviewed medical waivers in record. Food sample bag provided for gradual transition. Spay/Neuter: Provided post adoption spay and neuter information/resources for unaltered pets intact male dog Medical Consult Performed (Y/N/NA): no Medication Sent Home (Y/N/NA): no Behavior: Reviewed behavior notes available in record. Discussed slow introduction to new people, children and pets in the home. Discussed 3-3-3 rule. Reviewed behavior waivers in record. Discussed resources for behavioral concerns when applicable. Policies: Reviewed return policy and 14 day medical assistance covering the adopted pet for minor shelter related health concerns, advised it does not cover resident pets or treatment sought at outside clinics. Reviewed microchip registration and discussed licensing if in Multnomah County. Housing Restrictions (Y/N/NA): esa Additional Notes: Pick-up: 1/26/26
1/19/2026 1:44:32 PM	Transfer / Foster	OHS declined due to being too jumpy in kennel.
1/16/2026 3:43:55 PM	Behavior Notes	PLAYGROUP Retrieving from Kennel: Easy to leash and walk to the yard. CT Greeting: When Shayla 371011 came into the catch pen, Sir Lunch-A-Lot readily approached the fence for good sniffs with a high wagging tail. Entry: 1st dog in the yard. Yard Summary: Dog social. RR/PP play with Shayla and Shadow 380263. Somewhat of a push

playstyle, and did some mild head over neck posturing towards Shadow (another intact male), but never escalated.

Exit: Bumped to test new dogs.

Returning to Kennel: Easy to return to the kennel. CT

PLAYGROUP

Retrieving from Kennel: Easy to leash and walk to the yard. CT

Greeting: Came to the fence with a loose body, ears perked forward, and a high wagging tail. Good sniffs through the fence with the dogs in the yard.

1/13/2026 4:20:06 PM Behavior Notes

Entry: Ran into the yard, immediate FDBD sniffs with the dogs in the yard.

Yard Summary: Dog social. Play bows and brief PP play with Shayla 371011 and Claire 378401. Very comfortable in the yard, but became a bit focused on SM sniffing the female dogs in the yard.

Exit: Bumped to test new dogs.

Returning to Kennel: Easy to return to the kennel. CT

Intake

Date: 11-Jan-2026

Weight: 91 lbs

Attitude

Normal BAR.

Ears

Normal Mild dark debris in both ears.

Eyes

Normal Discolored sclera, likely due to aging.

Nose

Normal WNL.

Mouth/teeth/gums

Normal Mild staining and tartar. Suspect approximately 3-5 years.

Heart

N/A

Coat & Skin

Normal WNL.

Urogenital

Normal Confirmed intact male, two testicles palpated.

Mobility/musculoskeletal

Normal No issues observed.

Result:

Comments: Admission Behavior Observations:

Microchip Scan (Positive/Negative/Unable): Negative.

1. Offer Tasty Food: Readily ate.

2. Overall Body Posture: Neutral

3. Face: Soft.

4. Tail: Level

5. Ears: Neutral.

6. Eyes: Soft gaze.

7. Mouth: Closed, panting.

8. Vocalizing: Quiet.

9. Fear-Anxiety-Stress(FAS) Observed Intake: Low FAS.

10. Other Behavior Observations: Laying at front of kennel when I approached. Somewhat avoidant of slip leashing through cracked kennel door. Repeatedly backed away but then came forward, nosing to get out. Able to leash and walked with pulling to Admissions. Social with dogs at kennel fronts, casually sniffing when walked to and from Admissions room. Social and explorative once in Admissions room. Tolerated physical exam handling with neutral face and body. Readily ate treats when offered. Tolerated all treatments using treat distraction. Making preselect, recommend ADO pathway.

- Kennel Cough

The dog that you are adopting has been treated for Canine Infectious Respiratory Disease Complex (commonly called Kennel Cough) or may be at risk for developing it.

What causes kennel cough?

The most common cause is from a Bordetella bronchiseptica bacterial infection, though several viruses or bacteria may also be involved. Dogs may enter the shelter already infected or they may acquire these pathogens in the shelter, similar to a person catching a cold from a public place.

What are the common signs?

The most common sign is a hacking cough, though sneezing, eye discharge and nasal discharge may develop. A foamy mucus is sometimes produced after the coughing episodes, which may be confused with vomit. In severe cases, the dog may have a poor appetite, difficulty breathing or be lethargic. Kennel cough is usually self-limiting, but it can persist for several weeks.

Is kennel cough contagious?

Kennel cough is highly contagious to other dogs. If the dog you are adopting currently has kennel cough, he/she should be kept separate from other household dogs for at least 2 weeks after all signs resolve. This also includes avoiding contact with other dogs outside of the home, such as at the park or on walks. It is the responsibility of the adopter to provide treatment for other household dogs that develop kennel cough.

What if my adopted dog shows signs of kennel cough?

If the dog has clear nasal discharge and is eating, drinking and otherwise acting normally, then a vet appointment may not be needed. However, we should still be contacted when kennel cough develops so this can be noted in our records. Most mild episodes resolve on their own in 1-2 weeks. If the dog has more severe signs, such as colored nasal discharge, lethargy, fever or a poor appetite, then a vet appointment is recommended.

If your adopted dog develops kennel cough within the first fourteen (14) days after adoption, please contact us at (503) 988-9075 to schedule an appointment at MCAS. If signs develop after fourteen (14) days of adoption, it is the responsibility of the adopter to provide treatment.

I acknowledge that I have read and understand all of the above information and have received a copy of this waiver.
