Type: Dog

Breed: American Shelter Dog

Name: Jubilee (mcas)

Entry Date/Time	Category	Notes
3/5/2026 11:06:35 AM	Euthanasia Notes	C.E.T Euthanasia Process Final scan for microchip: Y SP Bottle #: SP#9 SP Amount: SP 4ml SP Route: SP 4ml Sedative/Analgesic Type/Amount/Route: TTDex 0.3ml IM Weight entered in ShelterBuddy: Y Asystole Confirmed: Y
3/5/2026 10:27:16 AM	Supervisor/Manager Notes	Euthanasia Sign Off - Supervisor/Manager Microchip scan has been completed (Y/N): Y ID Trace/Owner contact has been completed (Y/NA): Y Rounds Review notes have been entered (Y/NA): Y Foster/Transfer options have been checked (Y/NA): NA Evaluation category has been entered (Y/N):Y Euthanasia reason has been entered (Y/N):Y Due out date is correct (Y/N):Y Status is Awaiting Euthanasia (Y/N):Y
3/5/2026 10:17:54 AM	Rounds Review	Rounds discussed and will move to humane euthanasia due to severe fearful behaviors that result in frantic attempts to escape human contact to the point of causing self harm.
3/4/2026 4:42:37 PM	Behavior Notes	Data Collection: Data Collection: I entered the inside of kennel. All three dogs were against the side wall, and gave some nervous whining growls and barks. I sat down a few feet from them and began treating. Jubilee stayed between the two other dogs, but would stretch forward to take treats from hand or off the ground. He would push in front of his kennel mates to take them, and climbed over Cola(386348) on one or two occasions. If I attempted to move closer to them, or when I pat the ground next to me he began growling and barked a few times, while shying away. After sitting and treating for several minutes I ended interaction.
3/3/2026 2:48:05 PM	Behavior Notes	Data Collection: Jubilee and kennel mate Cola(386348) came to dividing door when I approached outside of kennel. Cola began huffing, and Jubilee barked intermittently, while staying behind Cola. Both periodically retreated out of sight. I entered kennel and sat down, tossing treats near door. Once Cola began to come outside for treats Jubilee would follow, hesitantly stretching forward to eat as well. Both dogs stayed near door, with some retreating. Once I offered hotdog Jubilee followed a treat trail a few feet from me, and hesitantly took treats from hand. I moved inside, and all three dogs huddled in the corner. Jubilee continued to hesitantly stretch to take treats from hand, then retreat back to kennel mates. Barked a few times throughout interaction, then retreated outside when there was commotion from neighboring dogs.
3/2/2026 4:02:54 PM	Behavior Notes	Data Collection: As I approached the kennel from inside, Jubilee was cuddled up on a bed with his two kennelmates Cobbler 386347 and Cola 386348. I began speaking sweetly and Jubilee raised his eyes to look up at me, but remained lying on the bed. I entered the kennel and crouched down facing away from them and tossed some american cheese, which all three dogs leaned

forward to eat. I spent several minutes talking in high/soft tones and all three dogs began taking treats from my hands. Jubilee would tentatively approach whenever treats were offered, and displayed no negative behaviors when Cola repeatedly stole the treats from him. Accepted brief pets on his head, but was not entirely comfortable and remained avoidant of the contact. I also went outside to work with them. It took a few minutes, but Jubilee began coming outside to eat treats from the floor. I did attempt to offer treats from my hand, but he would retreat inside if I reached towards him. As this was our first interaction I just did kennel time.

3/2/2026 1:41:05 PM	Behavior Notes	Pet was separated from kennel mates on back side of intake. As I entered, pet retreated to the back corner, occasionally stomping forward and barking with stiff body language. While moving in with a leash, pet jumped up towards the window and was able to climb through, leading to the top of the kennels. He remained avoidant and it took multiple staff members to corral him. He was then leashed and wrapped in a blanket and safely removed from the kennels.
3/2/2026 9:50:19 AM	Rounds Review	Rounds discussed and will add data collection, admission assist if able to get dog out of kennel. Follow up 3/5.
2/28/2026 4:45:16 PM	Animal Care Notes	<p>Admission Exam Attempt #: 2 Microchip Scan (Positive/Negative/Unable): Unable, probably could have scanned w wand scanner but didn't bring with me Weight (lbs): Looks to be same size as Cobbler 386347 who is 34lbs Observations During Interaction: I approached outside kennel. When dog saw me he jumped up w extremely tense face and body, growling and barking w tense mouth lips puckered. Ears forward, chest forward, tail up and stiff. Ran inside as I continued to approach. I stood at outside kennel tossing treats and calling out, dogs would approach threshold, bark and growl at me, and then immediately retreat. MM and I put PPE on (phasing out of shelter quarantine) and entered inside kennel. We sat inside w the 3 dogs, talking to them and offering them treats. Dogs remained in a pile in the corner of the kennel, trying to escape/hide from me. Attempting to climb the walls and forcing themselves into corners/under beds. Spent a few minutes with them before ending interaction. Data Collection Task Entered: 3/2 - 3/4/26 ACR for Behavior Meds: 2/27/26 Rounds Task Entered: 3/5/26</p>
2/27/2026 4:34:20 PM	Animal Care Notes	<p>Admission Exam Attempt #: 1 Microchip Scan (Positive/Negative/Unable): Negative Weight (lbs): Estimated between 30-40 lbs, based on exam of kennel mate Admissions completed. Observations During Interaction: Tense in face and body, barking and growling with whale eye and ears pinned back as staff entered kennel with the dog. He remained avoidant and darted away when attempted to leash, air snapping towards staff. Opted not to push further due to behavior concerns. Data Collection Task Entered: Y 2/27/26 ACR for Behavior Meds: Y 2/27/26 Rounds Task Entered: Y 2/27/26</p>

Comments: Admission Behavior Observations:

Microchip Scan (Positive/Negative/Unable): Scanned, negative

1. Offer Tasty Food: Not interested

2. Overall Body Posture: Cowering, chest forward, ears up.

3. Face: Tense

4. Tail: Tucked

5. Ears: Forward

6. Eyes: Whale shape, hard stare

7. Mouth: Closed. Some snapping.

8. Vocalizing: Quiet, growled once while snapping

9. Fear-Anxiety-Stress(FAS) Observed Intake: High FAS, was a safety concern

10. Other Behavior Observations: Very difficult to retrieve from kennel. JKT closed dog outside to separate from kennelmates. When she went around to outside kennel, dog began frantically climbing the walls. Climbed up the wall and into the window, then squeezed his way from the window sill to the top of the inside intake kennel. Dog began exit searching on top of intake kennels and several staff members were called in to help capture dog. Dog was then brought into intake room. I began slowly and cautiously attempting to touch him and when my hand was about 6 inches from him he snapped at me while letting out a brief growl, forward posture. I wrapped his muzzle with a small fabric lead and was able to safely place muzzle, dog continued attempting to bite. Able to complete tx and exam while muzzled, attempting to bite oral tx through muzzle. Carried back to kennel and removed muzzle/wrap/lead with mild difficulty. Dog was slightly frantic and again attempting to climb walls while exit searching.

- Cherry Eye

The dog you are adopting has been diagnosed with a prolapsed gland of the nictitating membrane (NM), also known as the third eyelid. This prolapse is commonly referred to as cherry eye.

What causes cherry eye?

The cause of cherry eye is not known, but in some breeds of dogs it may be hereditary. Normally, the gland can turn inside out without detaching. Cherry eye results from a defect that is responsible for anchoring the third eyelid, causing it to prolapse and protrude from the eye.

What are the signs?

When the gland prolapses it appears as a red, swollen mass at the inner corner of the eye near the muzzle. Sometimes discharge from the eye may be present as well. The incorrect location of the gland can affect tear production. If left untreated, this condition can lead to chronic dry eye and other complications.

How is it diagnosed?

A diagnosis of cherry eye is made visually during a physical exam.

What treatment is needed?

A topical eye ointment containing an antibiotic and a steroid may be used to reduce the inflammation in the gland. In mild or sporadic cases this may reduce the swelling enough for the gland to return to its normal size and position. Long term therapy includes surgical replacement of the gland. There are multiple different surgical techniques that may be used.

What do I need to do next?

Adopters should speak with their regular veterinarian to determine a long term treatment plan for this animal.

Any future treatments or diagnostics will be the responsibility of the adopter.

I acknowledge that I have read and understand all of the above information and have received a copy of this waiver.
